

WELCOME TO VITALR TECHNOLOGIES

This is Kaden's Homelab project that has a couple of different objectives:

1. **Versatility:** Emphasizes the flexibility and adaptability of your homelab to handle different tasks and experiments.
2. **Interconnected Tech:** Maintain seamless connection and interaction between various systems and components in your lab.
3. **Automation:** Using automation to streamline processes could be beneficial when setting up a homelab
4. **Learning:** A homelab needs to be a space for continuous learning and experimentation
5. **Resource:** A homelab as a valuable resource for your projects and skill development

As you can see, I have created VITALR as an acronym for the objectives I want to cover. Cool right?

Holla at me if you have any questions.
